ECO FRIENDLY

COST EFFICIENT

SHORT DELIVERY TIME

KARL GEORG GmbH, is a leading supplier in the crane and mechanical engineering industry for over 100 years, supplying well-known crane manufacturers, plant and machine builders and operators worldwide.

Our wide-ranging product portfolio and custom constructions include driven and non-driven wheel sets and crane wheels. In addition, our versatile **ATLAS** and **OLYMP** wheel blocks are used for transport tasks in handling systems, crane applications and mechanical engineering. Our customers value our products for their low-maintenance design, durability and reliable corrosion protection.

Whether manufactured in Germany according to DIN or TGL standards, customised to customer drawings or produced in series production. With individual colouring and coating, various flange options and a wide range of materials, we can meet your specific requirements – even for batch sizes starting from one piece and diameters ranging from 100 to 1,400 mm. Our product range is complemented by rope sheaves in various sizes as well as accessories such as drive shafts, pinions and geared rings.

All our products are manufactured and tested in accordance with strict quality standards.

KARL GEORG offers professional reconditioning and repair of worn or damaged crane wheels, wheel sets, and wheel blocks—directly at our factory and, on request, including a pick-up and delivery service.

After cleaning and disassembly, a professional assessment is carried out. Our customers receive a clear overview of reusable components, necessary new parts, and the entire scope of work.

Reconditioning conserves resources, reduces CO₂ emissions, and actively supports the circular economy. As a rule, savings of 30–40% can be achieved compared to a new product – with a result that is technically equivalent to a new part. Two years warranty is included as a matter of course.

PRODUCT RANGE

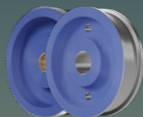

Driven- and non-driven wheel sets

Rope sheaves

Driven and non-driven wheel blocks

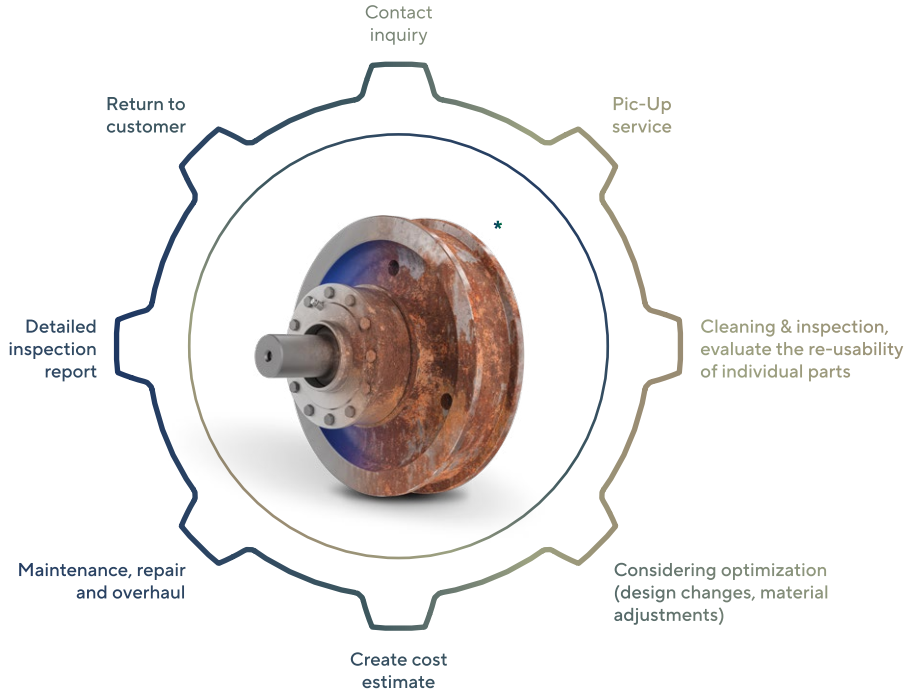

Crane wheels

BUILT STRONG.

REBUILT GREENER.

*** We offer repair and overhaul of any manufacturer or brand.**

HANDS-ON EXAMPLES

Crane Wheels, Wheel Sets, Bogies, Drive Shafts, Rope Sheaves
and many more ...

EXAMPLE 1

Repair of a splined drive shaft

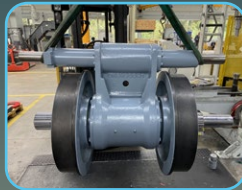

- overhaul of a crane wheel with a drive shaft
- reconditioning of the spline

EXAMPLE 2

Complete overhaul of wheel sets

- all components are inspected for re-usability
- defective components are replaced with new ones, e.g., wheels, seals and bearings
- after assembly, the wheel set is repainted according to the customer's specifications

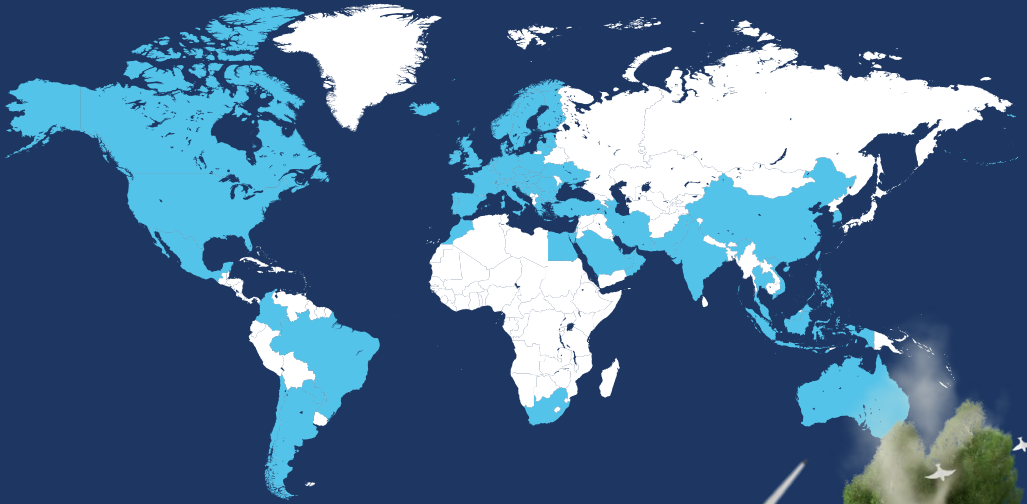

EXAMPLE 3

Complete overhaul of bogies

- all components are inspected for re-usability
- defective components are replaced with new ones, e.g., wheels, drive shafts seals, and bearings
- after assembly, the wheel set is repainted according to the customer's specifications
